Technical Project Manager | Implementation Consultant

SUMMARY

Technical project manager with 10 years across SaaS implementation, multi-unit franchise operations and oilfield completions engineering. Connects client systems to software (iMIS integrations, payment gateways, custom registration builds) and builds the trackers teams actually use: a P&L workbook adopted across a 140+ location franchise network and a field-ticket tracker run by 3 frac fleets.

CORE SKILLS

Implementation & Integration: Client onboarding, requirements gathering and field mapping, iMIS (ASI) IQA / REST APIs, iMIS write-back integrations, FTP data feeds, payment gateway setup (PayPal Payflow), UAT, admin documentation and client training

Technical: HTML/CSS, Excel/VBA, Postman, mobile app build distribution (iOS TestFlight, Android APK), Google Workspace; working knowledge of SQL, Python and JavaScript

Operations: Multi-site P&L, financial controls, SOP development, vendor negotiation, hiring and training, onsite event hardware

EXPERIENCE

Project Services Consultant (Project Manager) **Apr 2025 – Present**

Bravura Technologies | *Atlanta, GA*

SaaS event registration, exhibits and mobile app platform serving associations and corporate clients.

- Own implementation for a portfolio of concurrent association and corporate events, from kickoff and discovery through configuration, testing, onsite support and post-event reporting.
- Build and support iMIS (ASI) integrations: IQA REST lookups that return a registrant's company and member type by email, and a write-back integration coordinated with the client's third-party API manager; also support FTP and ProTech data connections.
- Configure payment gateways, including PayPal Payflow, resolving merchant-setup errors with the client's processor; wrote the step-by-step admin guide for adding a payment processor in the admin console.
- Build custom HTML/CSS registration and landing pages to client brand standards (e.g., Vertafore/NetVU Accelerate 2027) and fix layout issues on live registration sites.
- Configure exhibitor and sponsor registration in the Exhibits module and produce sponsor recognition assets in every required app and web size.
- Distribute mobile app review builds to clients (iOS TestFlight, Android APK) and manage feedback through final approval.
- Took over onsite event hardware after the hardware team was dissolved, supporting my own and other PMs' events; designing standardized, pre-assembled kiosk kits (tablet and printers in custom foam inserts) so onsite staff only plug in and power on.
- Lead client training on the registration, exhibits, mobile app and abstract-management modules, and turn raw platform exports (session tracking, surveys, speaker assignments) into client-ready reports and interactive HTML dashboards.

Project Manager – Business Development **Dec 2019 – Apr 2025**

SSE | *Shreveport, LA*

Regional seafood and chicken restaurant franchisor; grew from 50+ to 140+ locations during my tenure.

- Worked directly with ownership on franchise operations, bookkeeping and business development as the network grew from 50+ to 140+ locations.
- Built a company-wide P&L tracker in Excel/VBA shared through Google Cloud: each manager entered sales, payroll, food and operating costs for their location, and the workbook calculated P&L, food cost % and year-over-year snapshots. Adopted by every corporate location and most franchisee locations; still in use.
- Gave ownership location-level visibility that cut food waste and exposed cash shortages and theft.
- Turned around underperforming locations, from quick operational fixes to full second-generation reopenings: coordinated renovations, hired staff and trained new teams for several months after reopening.
- Recruited, trained and retained store managers and staff; stepped in to run individual locations directly when needed.
- Coordinated renovations and new-location build-outs across design, construction and operations teams; negotiated vendor and service-provider contracts.

Project Engineer – Completions **Nov 2018 – Dec 2019**

Basin Pump Down Services | *Midland, TX*

- Built an Excel/VBA field operations tracker used across 3 frac fleets, capturing real-time stage data, fluid volumes, proppant, pressures and pump rates, with automated per-product invoicing that produced customer-signed field tickets at the wellsite.
- Served as completions engineer for operators without in-house completions teams, designing frac programs (pad volumes, proppant schedules, pump rates, sand selection) in FracPro.
- Wrote the company's standardized completions procedures manual and field SOPs; onboarded and trained new engineers.

Project Engineer – Hydraulic Fracturing **May 2017 – Aug 2018**

FTS International | *Shreveport, LA*

- Technical advisor to operator clients on stimulation design and execution across the Haynesville, Bossier, Cotton Valley, Marcellus and Utica; produced pre- and post-job treatment reports.
- Ran fluid quality control and led field crews of up to 12; worked with the National Operations Center on equipment reliability improvements.

Mechanical Engineering Technician **Nov 2016 – May 2017**

Halliburton | *Odessa, TX*

- Assembled and maintained mud motors and MWD tools to customer specifications; provided 24-hour on-call support to active rigs.

EDUCATION

B.S. Petroleum Engineering, Louisiana State University, Baton Rouge, LA 2016

Software Engineering Certificate, General Assembly 2023
